200bps.ai

v1.20.0 · README

200 breakthroughs per second

200bps Publish

Post it right... and grow your account

A **free** Claude Code plugin. It checks your post, scores it out of 100, picks the best time from your own numbers, and posts to Instagram, LinkedIn, Facebook, TikTok and Snapchat. Only after you type **go**.

Built by Nasser · 200bps.ai

01 What does it do?

You have a post ready. But when should it go out? And how do you know it's good? **200bps Publish** is a free plugin for Claude Code. It runs on your computer, comes with **PIX**, your 3D assistant, and walks you through it step by step:

1. **Give it the folder.** Caption + image, carousel, Reel, or a PDF for LinkedIn. It posts to Instagram, LinkedIn, Facebook, TikTok and Snapchat.
2. **It checks everything.** The hook, hashtags, caption length, blocked words, and image and video specs.
3. **It scores the post out of 100.** You get tips that raise the score, and caption fixes you can approve, edit or reject.
4. **It picks the time.** From your own account data, not a guess. Not enough data? It tells you so and asks you.
5. **It waits for your go.** Then it publishes or schedules, and reads the post back from Zernio to prove it's really there.

✓ **Nothing goes out until you type go yourself.** Approving one post does not count for the next one.

02 Features

★ New in 1.20

🎁 Hide gift received · ↩ Hide replied

Two buttons in the Inbox hide everyone who already got your gift by DM and the comments you already replied to, so you see only what still needs you. Local only: nothing changes on Instagram.

📊 Followers per day, week or month

Every Followers chart switches between Total, Daily, Weekly and Monthly. The bars show how many followers you gained in each period, with your average, your best period and the latest one.

🎠 A whole carousel, not one image

Create an image: One image (several tries) or Carousel (slides in one style, in order). Any count up to 20, as your prompt says, or PIX's pick. Then ▦ Make a carousel post.

🖼️ Your images inside Publish

Click any image to open it big in the dashboard and scroll the carousel with the arrows, the mouse wheel or a swipe.

💾 Save images as a project

A carousel or any images you pick, saved in order (01, 02 ...) into one project folder, anywhere on your computer. One click turns it into a post.

💬 PIX shows you who needs you

PIX labels the comments that need you (for example 🎁 Send gift) and opens the Inbox filtered to them. Its reply drafts wait for you in Waiting.

🧪 Trial Reels

Turn on Trial for any Reel. It shows to non-followers first, then goes Automatic (shared to your followers if it does well) or Manual. One window lists every Reel not live yet, with what your results say and what Instagram says.

Plan at a glance

Each post shows its type on each network (▶ Reel, ▣ Carousel, ≡ Poll...), its time, and one badge per network (IG·3 = 3 accounts). Filters for a network or an account, and 🧪 on Trial Reels.

Click a day, edit in one click

A card per post with every action: View, Networks, **Reschedule** (any day and minute, +1 day, +1 week, your best hours, with the full date), Caption, Trial, Copy, Cancel.

💬 Ask PIX about a post

A small chat pops up right next to the post. PIX knows which post you mean and answers in the same box.

Fixes per network

“Ask PIX to fix” writes one caption per network, each in its own style, shown side by side. Use all, some, or edit.

The gift is Instagram only

People follow you, comment the word, and get the link by DM (the follow is checked inside the DM). LinkedIn and Facebook: the link goes right in the caption. Checks warn you.

Audience per account

Where each account's followers are: countries, cities, ages, gender and their clocks. The idea bank now shows on every Growth tab.

PIX in 3D

Your assistant in the dashboard. It listens, types while it works, answers, and does anything you ask. Anything public needs your go.

✨ Fit it for every network

One caption, rewritten for each network's rules (length, hook, hashtags), with the score change.

Every update reaches you

As a plugin with auto-update on, every feature and fix we push reaches you by itself.

From 1.17 to 1.19

🆎 Test two hooks

One Reel with two different first lines, posted as Trial Reels. After 48 hours, compare skip rate and watch time.

♻️ Recycle your best posts

Zernio re-posts a top post every few weeks or months with fresh hooks. It starts only after you type `go`.

LinkedIn polls and reposts

A question with 2-4 choices, or a post link you repost with your comment on top. Plus text-only posts.

Several accounts, copy and paste

Post to several accounts on one network, turn networks on or off per post, and copy a post to another day.

Post checks

Readiness check

Python, the key, the Zernio connection, accounts and add-ons. If anything is missing, it tells you how to fix it.

Caption check

The hook before “more”, a search keyword in the first line, a closing question, a cap of 5 hashtags, and words you don't want.

Media check

Sizes and dimensions (read-only). Then Zernio's validator runs before anything is sent.

Score out of 100

One clear number, with the tips that raise it.

Fixes you approve

Before and after with the score change, and a version per network. Approve, edit or reject. Your original is always backed up.

Undo anything

Use `ↀ` on each step, or revert any change from the Changes timeline before you publish.

Time and scheduling

Best time, with evidence

For each day: the best hour, how many posts are behind it, the lift vs your average, and a confidence level. Adjusted to your audience's time zones.

Plan: month, week or day

Every post with its type, time and networks. Click a day to see all its posts, or drag a post to move it.

Batch schedule

Pick several folders. It fills the times from your own data, and you type `go` just once.

Cancel from anywhere

A scheduled post is removed before it goes out, and your draft stays. You type `cancel` to confirm.

↗ Publishing and managing

One-click publish, verified
It uploads, then reads the post back from Zernio to prove it's there: status, time, links.

Posts tab
Published, scheduled, needs a fix, and drafts, with their images and links.

New post, made easy
Drag and drop images or video from your computer, or use a post folder. Then order and name them.

Reel cover
A frame from the video, your own image, or a design in your brand. You see it in the profile-grid crop.

↗ Growth

Growth dashboard
Followers (total, or gained per day, week or month), your goal and progress ring, top posts, the engagement heatmap, and your audience.

Idea bank
Ideas for your next posts, each with its hook, outline and call to action.

DM gifts (Instagram, optional)
“Follow us and comment *skill*, and the link comes to your DMs.” Only with your permission, post by post. Other networks get the link directly.

Settings per network
Instagram: Trial Reels (Automatic or Manual), location and first comment. LinkedIn: poll or repost. Facebook: post, Reel or Story. TikTok: who can see it and your consent. Snapchat: Story or Spotlight.

✦ PIX with you in the dashboard

PIX talks to you
It answers in a bubble next to it and asks you with buttons. The first answer to arrive wins.

Note to PIX (or 💬 next to any post)
Your notes and its replies in one live chat, with **“✓ Claude got it”** on every message.

03 The dashboard

`Opens by itself on 127.0.0.1` · Arabic and English (full RTL) · Light and dark · 12h or 24h · `Ctrl/⌘ + K` for everything · Hover tips + full guide · PIX in 3D · Right-click any post · Phone · tablet · desktop

The post's journey in clear steps: **Check** → **Cover** → **Time** → **Gift** → **Go**, with one “Next step” button. New: Plan at a glance with filters, day cards, 🧪 Trial Reels, audience per account, and 💬 Ask PIX next to any post.

04 What you need

- **Claude Code**
- **Python 3.9 or newer.** No `pip install` needed.
- A **Zernio** account and API key, with your accounts connected (Instagram must be Business or Creator; Facebook a Page; Snapchat a Public Profile).
  Analytics add-on for best time and numbers · Inbox add-on for comments and DM gifts.
- Optional: `ffmpeg` / `ffprobe` to verify video specs.

05 API keys: how to set them up

The skill needs **one key only**: your **Zernio** key. It connects the skill to your accounts and publishes for you.

1) Create a Zernio account and get the key

1. Sign up at **zernio.com**.
2. Connect your accounts: **Instagram** (must be a **Business or Creator** account) and **LinkedIn**, plus **Facebook**, **TikTok** and **Snapchat** if you like.
3. Go to **Settings** → **API keys**, create a new key and copy it.
4. Optional but recommended: turn on the **Analytics** add-on (best time, dashboard numbers) and the **Inbox** add-on (comments, DM gifts).

2) Save it in the skill (two ways)

Easiest: from the dashboard

Run `/200bps-publish set me up`. In the **Connect Zernio** card (or **Settings** → **Keys**), paste the key and press **Save**. It's tested right away and shown masked.

By hand: the `.env` file

In your working folder (not inside the skill), copy `.env.example` to `.env` and paste the key after the `=`.

```
# my-posts/.env   ← your working folder, never the skill folder
ZERNIO_API_KEY=<your-key>
```

3) Check it works

In the dashboard, press **Test** next to the key. You'll see ✓ **Connected** and your account count. Or ask Claude to run `bps.py doctor` to see every check.

> 🔒 **Never put the key in a chat**, a commit or a screenshot. It lives in `.env`, readable only by you, and `.gitignore` keeps it off GitHub. If it leaks, revoke it in Zernio and create a new one.

06 Install

Option 1: as a plugin (recommended)

In Claude Code:

```
/plugin marketplace add artisanv/200bps-publish
/plugin install 200bps-publish@200bps
```

Then **turn on auto-update** once: `/plugin → Marketplaces → 200bps → Enable auto-update`. Every feature and fix we push reaches you by itself, even when the version number stays the same.

Option 2: zip from the Releases page

Download the file from `github.com/artisanv/200bps-publish/releases` and unzip it into your project:

```
mkdir -p my-posts/.claude/skills && cd my-posts
unzip ~/Downloads/200bps-publish-v1.20.0.zip -d .claude/skills/
claude
```

The folder must be named `200bps-publish` inside `.claude/skills/`.

07 First run

```
/200bps-publish set me up
```

1. The dashboard opens with a **Connect Zernio** card.

2. Paste your Zernio key there and press **Save**. It's tested right away (details in section 05, API keys).

3. Claude asks the setup questions **once** (you can say "defaults"): language, time zone, accounts, search keywords, blocked words and hashtags, follower goal, Trial Reels (off by default), location, LinkedIn personal or company, and DM ice breakers.

⚠️ **Never paste a key into the chat.** Keys go in the dashboard only, and are saved in the `.env` file in your folder. If you paste one by mistake, revoke it in Zernio and create a new one.

08 How to use it

Make one folder per post:

```
posts/agent-anatomy/
  caption.txt              # the caption (required)
  caption.linkedin.txt     # LinkedIn version (optional)
  01.jpg 02.jpg …          # images in order (or one .mp4 Reel, or a .pdf)
  cover.jpg                # Reel cover 1080x1920 (optional)
```

```
/200bps-publish posts/agent-anatomy
```

You can also just talk to it in your own words:

"open my dashboard" "report on my last post" "give me post ideas"

"schedule these folders at my best times" "set my ice breakers"

Main commands (Claude runs them for you)

Command	What it does
`bps.py doctor`	readiness checks
`bps.py dashboard`	open the dashboard
`bps.py analyze <folder>`	checks + score for a post
`bps.py schedule best|now|<ISO>`	set when it goes out
`bps.py publish --confirm`	publish / schedule — only after your "go"
`bps.py batch scan|prepare|suggest|run --confirm`	batch scheduling
`bps.py cancel --post ID --confirm`	cancel a scheduled post
`bps.py cover frames|use|design`	Reel cover
`bps.py report`	results 48h+ after publishing
`bps.py jobs`	background jobs with % done
`bps.py trial list|advice|set`	Trial Reels for waiting Reels
`bps.py rewrite --file v.json`	one caption per network
`bps.py image gen|claude`	OpenAI or Claude-designed images

09 Safety and privacy

- **Nothing goes out without your `go`.** For batch scheduling, one `go` covers exactly the posts and times you saw.
- **Cancelling also needs your OK.** You type `cancel`.
- **DM gifts are optional.** Post by post, off by default, and Instagram only.
- **Trial Reel on a scheduled post.** It changes only after you type `edit`, and only the Reel you chose.
- **Your keys stay on your computer.** They live in `.env`, readable only by you, and are never shown in full. Each key goes only to its own service: Zernio to `zernio.com`, and OpenAI (optional, for images) to `api.openai.com`.
- **Moving, editing and deleting also need your word:** `move`, `edit` and `delete`.
- **TikTok's consent is yours only.** Claude can't give it for you.
- **The skill never sees your passwords.** You connect on the network's own page.
- **Best time = your numbers only.** It never makes up numbers.

- **Your voice stays yours.** Fixes are suggestions and apply only with your approval.
- **The dashboard runs on `127.0.0.1` only**, and everything stays inside your project folder.

10 Frequently asked questions

Is it free?

Yes, the plugin is free. You need a Zernio account (and its add-ons if you want analytics and the inbox).

Can it publish on its own without my OK?

No. Publishing, gifts and cancelling don't run without confirmation. The dashboard asks you to type `go` or `cancel` (or `move` / `edit` / `delete`) yourself.

Why does it say there isn't enough data for best time?

Because it won't give you a generic time from the internet. It needs enough posts on your account. Until then, it asks you.

Does it work on Windows, Mac and Linux?

Yes, on any computer with Claude Code and Python 3.9+.

Can I delete a published Instagram post from the skill?

Instagram doesn't let apps delete published posts. The dashboard gives you the post's link so you can delete it in the Instagram app. You can cancel scheduled posts as usual.

11 License and brand

- **Code:** MIT license.
- **Brand:** the 200bps.ai name, the lime mark and the dashboard's visual identity are **not under the MIT license**. You may use them as they are, as part of the skill.
- Please keep "**Built by 200BPS.ai**" as it is. 🙏
